

$\langle \sigma v \rangle$ ratio to correct form

1.0 $\times$ (matches Table VIII, $|\Delta|=0$)

purely textual pitfall:
/ vs $\times$

$\approx 0.25\times$ ($\sim 4\times$ low at *every* T)

division form (correct)

$$\theta = T / [1 - \frac{T(\dots)}{1+T(\dots)}]$$

multiplication form (bug)

$$\theta = T \cdot [1 - \frac{T(\dots)}{1+T(\dots)}]$$
